Education

Carleton University Ottawa, ON
Bachelors of Software Engineering *Expected Graduation: June 2027*

Honours: Dean's Honour List (2025/26 academic year)

Relevant Coursework: Algorithms and Data Structures, Object Oriented Programming, Software Engineering Practice, Operating Systems, Real Time Concurrent Systems, Computer Communications

Technical Skills

Languages: Python, SQL, Java, JavaScript, TypeScript, C, Bash, HTML, CSS
Data: Data Pipelines (ETL), Data Validation, Data Quality, pandas, scikit-learn, Power BI, Cognos, Jupyter
AI & ML: PyTorch, TensorFlow, Computer Vision, LLM APIs (Groq, Llama 3), Prompt Engineering
Back End & Web: REST APIs, Flask, FastAPI, Spring Boot, Spring Data JPA, Node.js, React
Tools & Cloud: Git, GitHub, Docker, Linux, CI/CD, Azure, Google Cloud Platform, VS Code, IntelliJ, Excel
Practices: Agile, Test-Driven Development, Integration Testing, User Acceptance Testing

Experience

Teaching Assistant Jan 2025 - Present
Carleton University

- Supported **120 students** on complex technical topics and gave detailed written feedback on project proposals, reports, and final drafts, focusing on clarity and correctness.

Logistics & Marketing Volunteer, Judge Sep 2026
Hack the Hill Hackathon, University of Ottawa

- Helped run logistics and marketing for the September 2026 hackathon and judged **20 teams** on their projects and live demos.

Program Innovation & Reporting Intern Sep 2025 - Dec 2025
Canadian Air Transport Security Authority (CATSA)

- Built **data pipelines** that gathered, merged, and **transformed datasets** from multiple sources, running **data quality** and **validation** checks so reporting stayed accurate and consistent.
- Validated **Power BI** reports against source data through user acceptance testing and ran ad hoc analyses that the team used for operational decisions.

Undergraduate Researcher (Generative AI) Summer 2025
Carleton University, Systems and Computer Engineering (Supervisor: Dr. Rami Sabouni)

- Built a **Python** and Streamlit app with a teammate that uses a **large language model** to process lecture notes, extracting headings, writing summaries, and generating practice questions.
- Integrated Llama 3 through the **Groq API** with task specific prompts, temperature tuning, and **retry handling**.

Projects

WatchAgent: Weather Event Detection Service | *Python, FastAPI, SQLite, Docker, pytest, GitHub Actions*

- Built a backend service that polls live weather for 3 cities every 5 minutes and detects notable events, exposing readings and events through a **FastAPI REST API**.
- Containerized it with **Docker Compose** and wrote **15 pytest tests** run in **GitHub Actions CI**.

SilentGuardian: Fall Detection System | *Python, PyTorch, TensorFlow, Flask, Raspberry Pi*

- Built an AI safety system with a **team of four** that processes a live camera feed on a Raspberry Pi and detects falls in real time, reaching close to **95% accuracy**.
- Built a **Flask REST API** back end that sends caregiver alerts and logs every detected event for review.

TokenTracker: AI Observability Dashboard | *React, Vite, FastAPI, Prometheus, Grafana, OpenTelemetry*

- Built the **React** front end for an LLM chat app at the Canada DevOps Hackathon and connected it to the team's **FastAPI** back end, showing token usage, latency, toxicity status and an embedded **Grafana** dashboard.

Locutus AI | *React, JavaScript, Node.js, Vite, Deepgram API*

- Built an AI public speaking coach at **Hack the Hill** with a **React** front end and a **Node.js** back end that uses the Deepgram API to analyze speech in real time.
